# Deployment Procedure
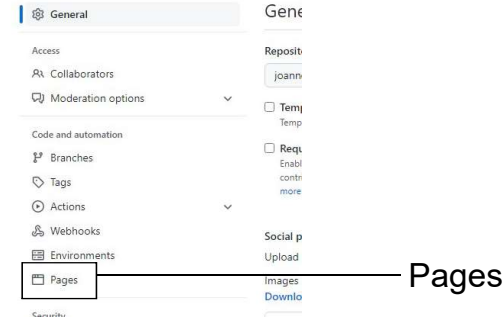

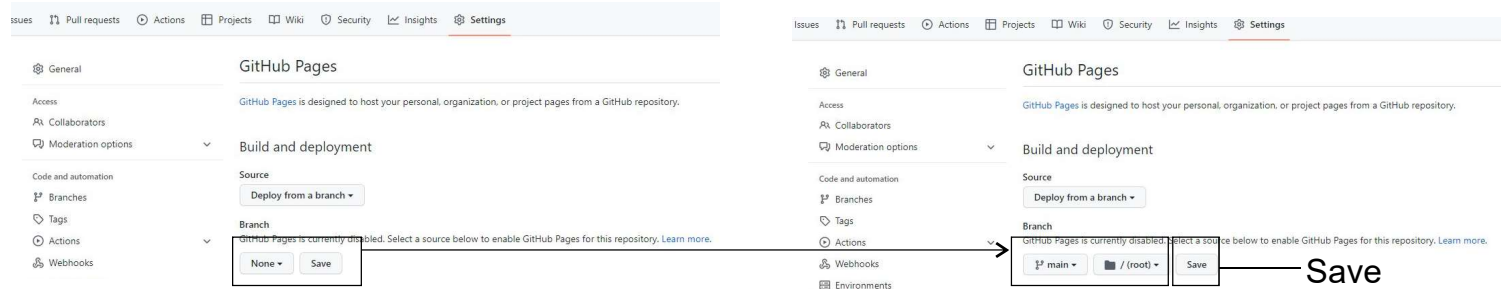

1. In GitHub On the joanne-geraghty-music repository page select settings:

Settings

2. In settings select the 'Pages' option:

Pages

3. In the GitHub Pages window, ensure 'Deploy from a branch' is selected in the 'Source' dropdown under the 'Source' heading and then select the 'main' branch and 'root' directory from the 'Branch' dropdown selector under the 'Branch' heading. When these are selected, press save to initiate the build of the site:

Save

4. After save is pressed in the previous step, GitHub Pages will state "Your GitHub Pages site is currently being built from the main branch" where it previously stated "GitHub Pages is currently disabled"

5. GitHub will take a short period to build the site. After a short period, press F5 to refresh the page and the link to the deployed site will be shown. If it is not yet shown, wait another short period then try pressing F5 to refresh the page again. Repeat this wait and refresh procedure until the link is show.
